

# LIFE HUTCH VR

## Scene 4 Flight Controls

5/20/20

Scene 4 is a flight simulator experience and can be challenging to beat. There are two things to consider when flying across the lava planet. First, your starfighter is designed for space flight and heavily damaged. Second, pushing the down controls is like pulling back on the flight stick of an airplane. This will lift the nose of the starfighter and help you gain altitude and bank into turns. The flight controls are set up to control the angle of tilt/yaw and roll while you fly in both the VR and desktop versions of Life Hutch VR.
